In accordance to Marathon County Chapter 15:

- All new and existing septic tanks shall be pumped within three years of the date of installation and at least once every three years thereafter, unless upon inspection the tank is found to have less than one-third of the volume occupied by sludge and scum.
- Pumping of a septic tank shall be done by a certified septage servicing operator in accordance with NR 113, Wisconsin Administrative Code.
- The owner of each holding tank shall sign a Maintenance Agreement. This documents maintenance requirements for the holding tank system, including owner's responsibility to maintain a servicing contract, to have the system serviced, and to provide servicing reports in accordance with this ordinance. The Maintenance Agreement shall be binding upon the owner, the heirs of the owner and assignees of the owner. The Maintenance Agreement shall be filed with the register of deeds and shall be recorded in a manner which will permit the existence of the agreement to be determined by reference to the property where the holding tank is installed.
- The Department may require the owner of a holding tank found to be violating the Maintenance Agreement to replace the holding tanks with a soil absorption system or, if the parcel is unsuitable for any type of soil absorption system, to hire a plumber to install a water meter and evaluate the holding tanks for code compliance and sign a new Service Contract which requires the certified septage servicing operator to report water meter readings at each pumping.
